

Name: DAO MINH QUY

Student ID: 2026512818

Step 1 — Create GitHub Repository

First, create a GitHub repository for the application.

The repository is used as the source code repository for the Render deployment.

Step 2: Upload Project to GitHub git

add .

git commit -m "AI currency converter" git

push

Step 3 — Log in to Render

Open Render and log in using the GitHub account connected to the project.

Select **New** → **Web Service** to create a new web service.

New Web Service

It looks like you're using **Flask**, so we've autofilled some fields accordingly.

Source Code minhquy03 / AI-Currency-Converter [Edit](#)

Name
A unique name for your web service. AI-Currency-Converter

Project Optional
Add this web service to a **project** once it's created. Select a project... / Select an environment...

Language
Choose the **runtime environment** for this service. Python 3

Branch main

[Deploy web service](#) [Cancel](#) \$7 / month 0.5 CPU 512 MB RAM

Step 4 — Connect GitHub and Select the Repository

Connect GitHub to Render and select the repository containing the application.

Step 5: Configure the Web Service

New Web Service

Language
Choose the **runtime environment** for this service. Python 3

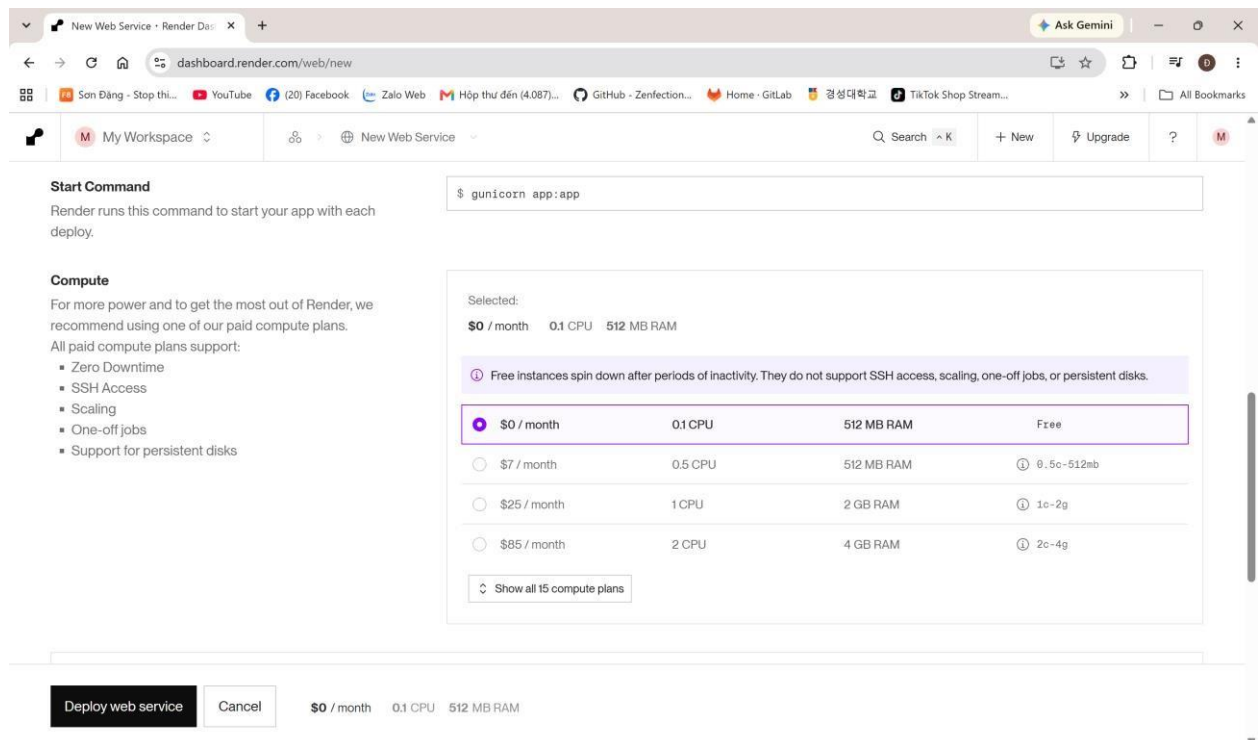

Branch
The Git branch to build and deploy. main

Region
Your services in the same **region** can communicate over a **private network**. You currently have services running in **Oregon**. Oregon (US West) 2 existing services [Deploy in a new region](#) +

Root Directory Optional
If set, Render runs commands from this directory instead of the repository root. Additionally, code changes outside of this directory do not trigger an auto-deploy. Most commonly used with a **monorepo**.

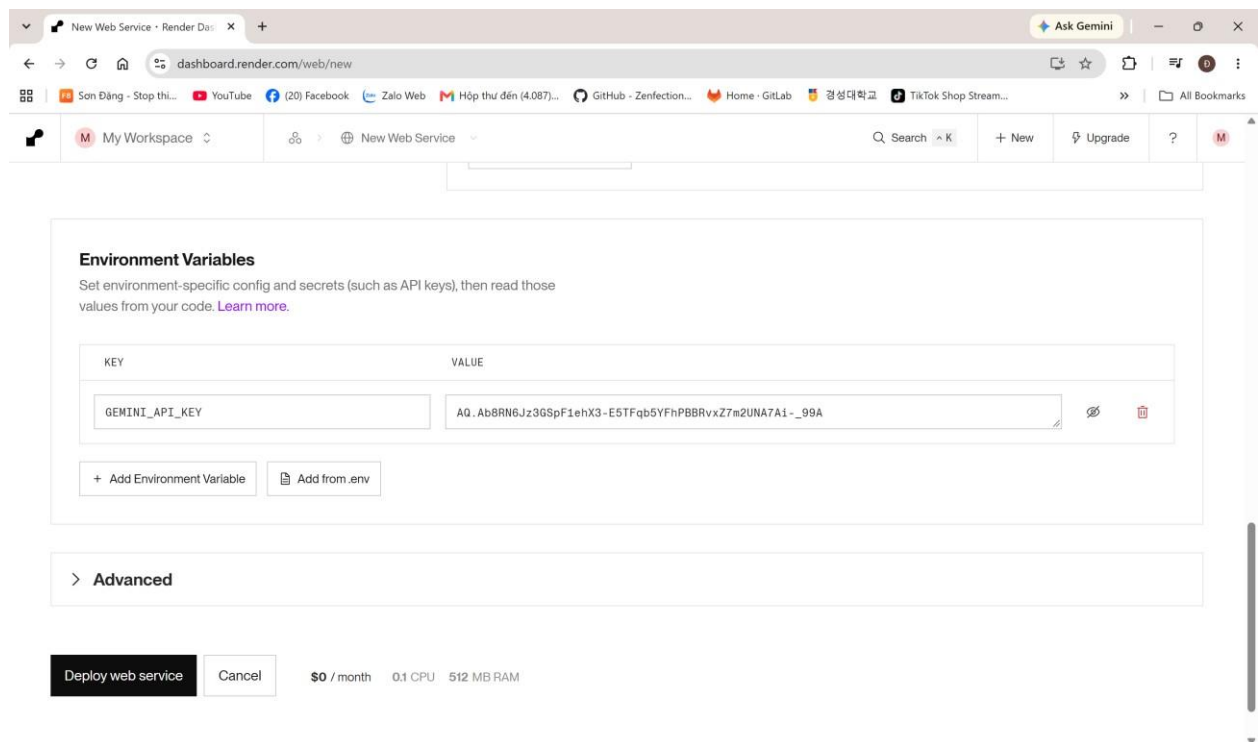

Build Command
Render runs this command to build your app before each deploy. \$ pip install -r requirements.txt

[Deploy web service](#) [Cancel](#) \$0 / month 0.1 CPU 512 MB RAM

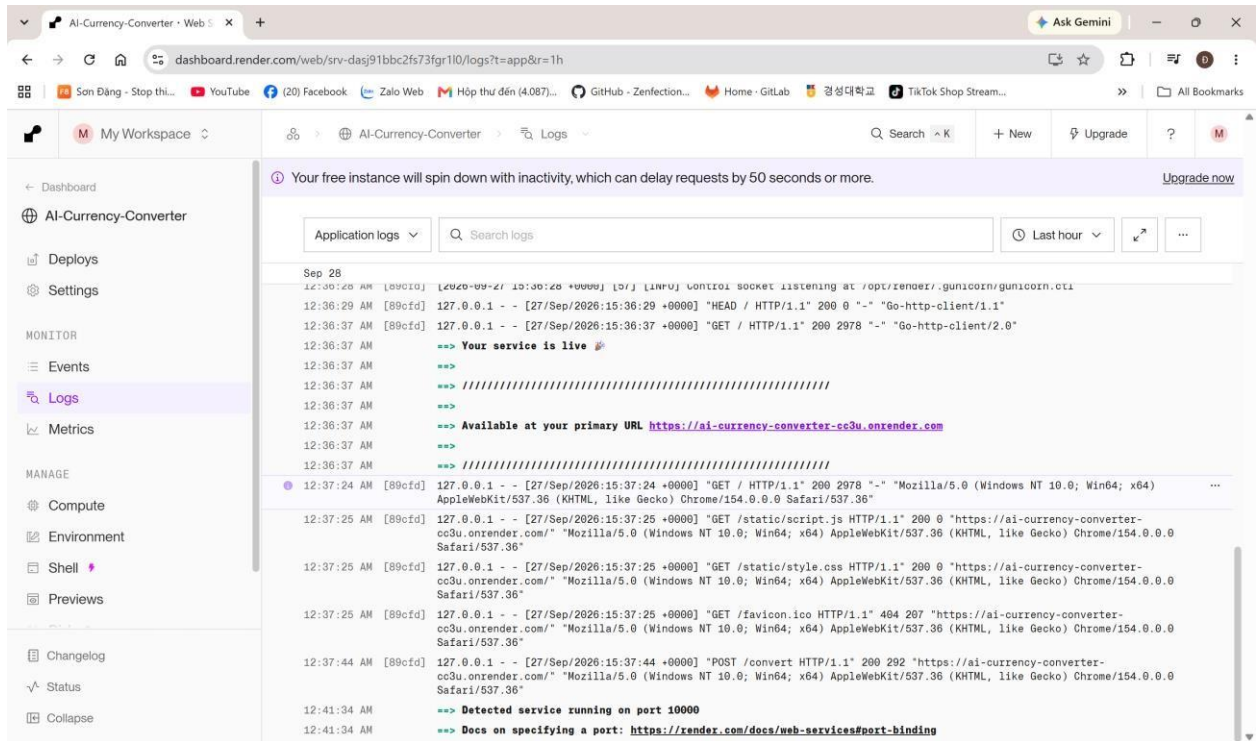

Step 6 — Add the Gemini API Key

The application uses the Gemini API, so the API key must be added as an environment variable on Render.

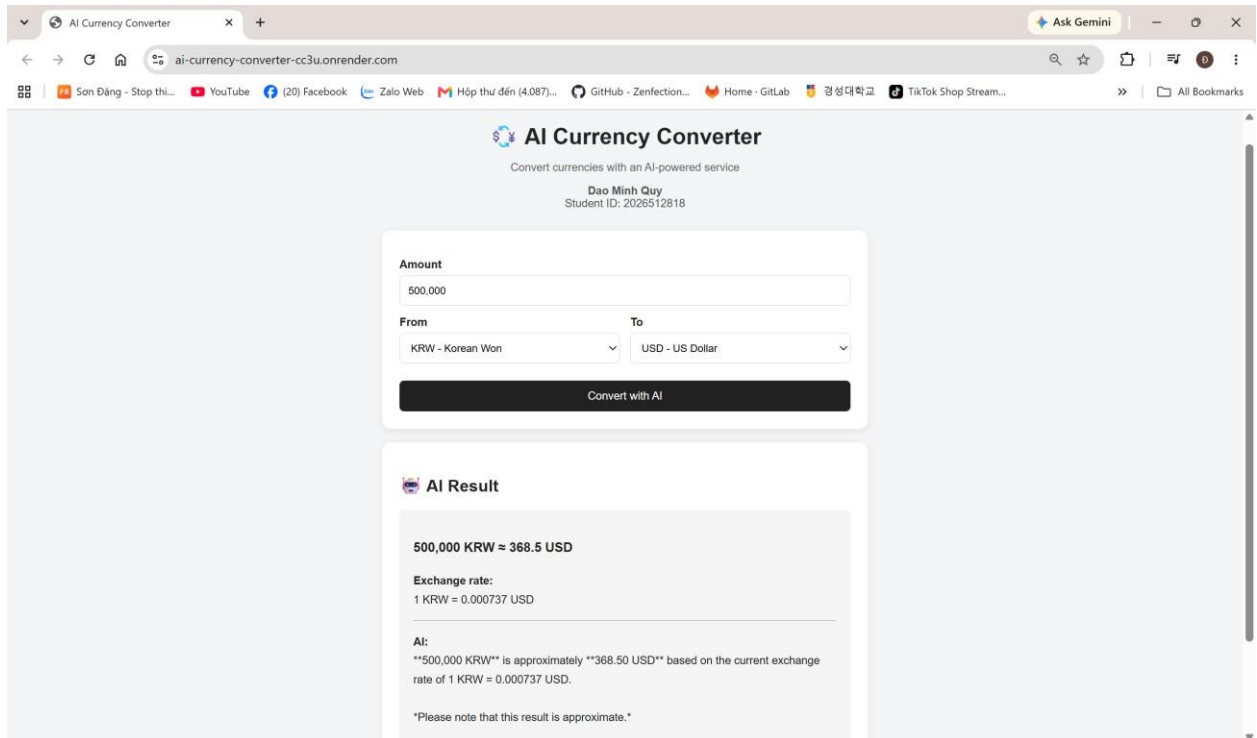

Step 7 — Deploy the Application

Click Deploy Web Service to start the deployment

The screenshot shows the Render dashboard for a project named 'AI-Currency-Converter'. The left sidebar contains navigation links: Dashboard, AI-Currency-Converter, Deploys, Settings, MONITOR (Events, Logs, Metrics), and MANAGE (Compute, Environment, Shell, Previews, Changelog, Status, Collapse). The main area displays application logs. A purple banner at the top states: 'Your free instance will spin down with inactivity, which can delay requests by 50 seconds or more. Upgrade now'. The logs show the application starting on Sep 28 at 12:36:28 AM, listening on port 10000. Subsequent logs at 12:36:29 AM and 12:36:37 AM show HTTP requests and responses, including a '200 0' status and a '200 2978' status. A message 'Your service is live' is displayed. At 12:36:37 AM, the application is available at the primary URL: <https://ai-currency-converter-cc3u.onrender.com>. Further logs at 12:37:24 AM and 12:37:25 AM show GET requests for static files (script.js, style.css, favicon.ico) and a POST request to /convert. At 12:41:34 AM, a message indicates 'Detected service running on port 10000' and provides a link to the docs on specifying a port: <https://render.com/docs/web-services#port-binding>.

Step 8: Test the Application

The screenshot shows the AI Currency Converter web application in a browser. The page has a header with the title 'AI Currency Converter' and a subtitle 'Convert currencies with an AI-powered service'. Below this, the user's name 'Dao Minh Quy' and student ID '2026512818' are displayed. The main form contains an 'Amount' input field with '500,000', a 'From' dropdown menu set to 'KRW - Korean Won', and a 'To' dropdown menu set to 'USD - US Dollar'. A 'Convert with AI' button is located below the form. The 'AI Result' section shows the conversion: '500,000 KRW ≈ 368.5 USD'. It also displays the 'Exchange rate: 1 KRW = 0.000737 USD'. A note from the AI states: '500,000 KRW is approximately 368.50 USD based on the current exchange rate of 1 KRW = 0.000737 USD.' A disclaimer at the bottom reads: 'Please note that this result is approximate.'
